

CANRIG DRILLING TECHNOLOGY LTD

PRODUCT BULLETIN NUMBER: 06

DATE: April 6, 1993

SUBJECT: Handler Rotate and Handler Lock

SERIAL NUMBERS: 002-010

DISCUSSION:

1. To avoid injury to personnel, do not use the Handler Rotate with the links tilted significantly of center.
2. To avoid inadvertent rotation of the pipe handler, keep the handler LOCKED while drilling. Visually verify the lock pin engagement.
3. To avoid in advertent rotation of the pipe handler, always LOCK the handler when using the back-up wrench. Visually verify the lock pin engagement.
4. Under most circumstances, the handler can remain LOCKED except while being repositioned. An exception is in allowing the drill string to rotate when hoisting spiral stabilizers in tight hole. Extra caution should be exercised at any time that the handler is unlocked.
